

Camping in 2100 will look like....?

This activity aims to help the young people consider what a change in weather conditions might do to Scouting activities, particularly camping. The focus here is sea level rise and flash flooding which are both expected to increase if CO₂ emissions continue at the current rate. In July 2021, Scouts in Germany had to abandon camp due to a flash flood (<https://www.vrt.be/vrtnws/en/2021/07/25/scouts-abandon-camp-as-floods-strike/>)

These activities can easily be adapted to what is near your hut and to different impacts of climate change. E.g. higher temperatures and increased drought.

We have included some questions/topics for discussion with each section. These are to encourage conversations about climate change at each age group and to explore what their understanding is as a Scout. Encourage imaginations to run wild as they plan a campsite for the future!

If you would like more information about this activity please email:

Beavers:

Scientists have predicted lots of changes for the year 2100 if we continue to treat the Earth unkindly by emitting lots of carbon dioxide. They say that icebergs could melt and rainfall will increase leading to lots of flooding. What will this mean for future Beaver camps?

Decorate a piece of paper with your favourite things about camp and then fold them to make the best boat for a camp. Maybe you could try some origami?

You will need:

Paper

Pens

Questions to ask:

- How will we make hot chocolate for the campfire?
- How will we make the campfire?
- How could we stop a sudden flood washing away camp?
